- *Internet of Things* is a recent technology that creates a global network of machines and devices that are capable of communicating and exchanging data with each other through the Internet. There is a difference between the Internet of Things and the Internet. Internet of Things can create information about the connected objects, analyze it, and make decisions; in other words, one can tell that the *Internet of Things* is smarter than the Internet. Security cameras, sensors, vehicles, buildings, and software are examples of things that can exchange data among each other.

- *Python* is a computer language used by software developers, various scientific communities, Data science researchers, Machine learning and Deep learning communities.

Both of these topics are very important for new students, researchers for betterment of their academic knowledge and professional carrier in future.
